

## Aircraft Maintenance Vans

For quick, thorough, and efficient maintenance and small repairs of aircraft straight on the ramp.

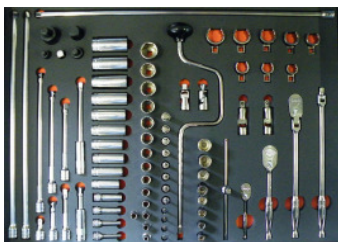

### CUSTOMER ADVANTAGES

- individually designed according to customer needs
- mobility
- power on board (230V)
- workbench on board
- all tools are orderly

Equipped with a professional workbench and 230V power, such vehicles provide infrastructure for most "small" jobs to be carried out right on the spot. All necessary tools are immediately available, from a clear system and a reliable order. Standard tools have their predefined place within a moulded storage system. No wasted time for search, and no chance to lose or forget tools after the job. Missing tools after a finished job will be detected immediately. And the flexible system will be extended for any special tools required for specific jobs and specific locations. From standard to specific, the system is tailor made for any specialist's field or type of aircraft to be served. Mobility and reliability of the appropriate aircraft maintenance vehicle makes work more pleasant, a lot more efficient, and certainly more economical.
